

Ambulance Patient Offload Time September 2018

*Monthly
Report*

RIVERSIDE COUNTY AMBULANCE PATIENT OFFLOAD TIME

The data provided illustrates total ambulance patient offload delay time (hh:mm) by month for 2014 through September 2018 from hospitals within Riverside County. To qualify for this chart, the duration of offload delay must be greater than 30 minutes, and only the time period after the first 30 minutes is summed.

Beginning January 2017, offload times represented are measured using time of patient arrival at hospital (eTimes.11) until the time of patient transfer (eTimes.12) as represented on the ePCR (electronic patient care report). This represents a different methodology in offload time measurement. Prior to January 2017, offload times were calculated using CAD times, beginning with the time that dispatch placed the ambulance on bed delay status until the time the ambulance left the hospital. **As of August 2017, data represented includes all participating providers (previously AMR only).**

This chart represents the difference in the old vs. current by displaying the former time measurement/methodology in grayscale. The difference in methodology is illustrated in the timeline below.

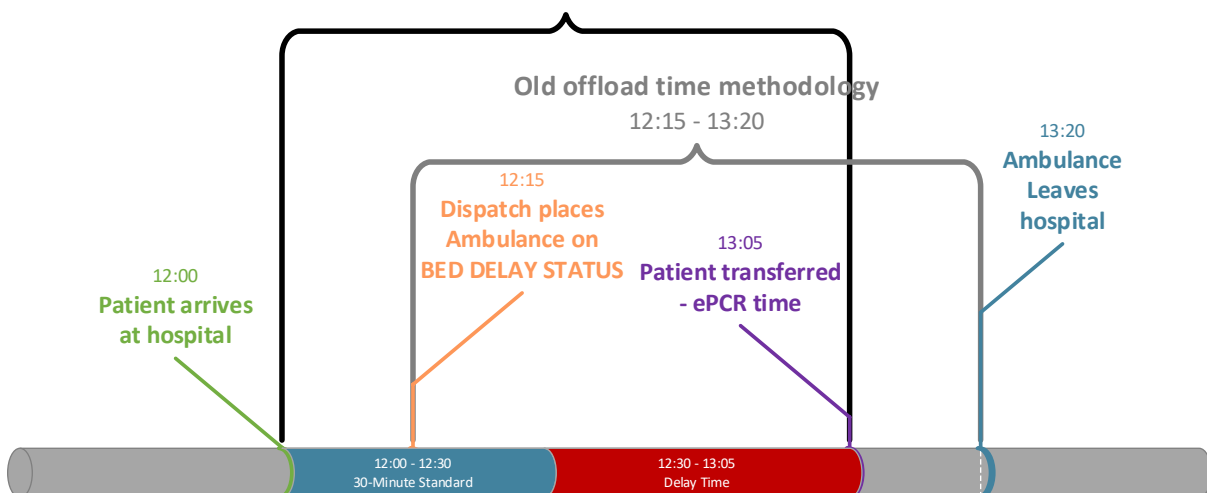

*For May of 2016, actual totals may have been slightly higher than are reported due to a 3-day CAD outage.

**Beginning August 2017, times represented include all participating providers. Prior to August, data included AMR responses only.

Offload time methodology

12:00 - 13:05

AMBULANCE PATIENT OFFLOAD TIME BY HOSPITAL

September 2018 APOT by Hospital							
Hospital	Total ALS Transports	APOT	APOD Hours	APODs	APOD Compliance	APOT-1*	
Corona Regional Med Ctr	750	320:25:16	79:09:23	210	72.0%	0:49:22	
Desert Regional Med Ctr	1,021	223:59:03	7:08:59	36	96.5%	0:22:34	
Eisenhower Health	1,186	207:02:55	3:50:26	22	98.1%	0:19:46

*APOT-1 is the offload time represented at the 90th percentile. See page 6 of this report for complete definitions.

Key: High Low/Best

EMERGENCY TREATMENT SERVICES

The following table includes all transports during September 2018 to Emergency Treatment Services (ETS). Since transports to ETS do not meet the EMSA definitions for APOT (see page 6 of this report), they are not being included with the APOT aggregates. Comprising over 3% of overall transports in 2018, the number of transports to ETS is significant enough to impact the EMS system and, therefore, warrants reporting.

September 2018 ETS						
Destination	ETS Transports	Total Offload Time	APOD Hours	APODs	APOD Compliance	90th Percentile
Emergency Treatment Services	500	313:35:14	103:56:25	270	46.0%	1:06:00
Grand Total	500	313:35:14	103:56:25	270	46.0%	1:06:00

ETS 2018 Year-to-Date						
Destination	ETS Transports	Total Offload Time	APOD Hours	APODs	APOD Compliance	90th Percentile
Emergency Treatment Services	4,018	2614:59:55	898:02:10	2,266	43.6%	1:09:38
Grand Total	4,018	2614:59:55	898:02:10	2,266	43.6%	1:09:38

AMBULANCE PATIENT OFFLOAD TIME BY HOSPITAL (CONT'D)

UNDERSTANDING APOD AND APOT

Ambulance Patient Offload Time (APOT)

The Time interval between the arrival of an ambulance patient at an ED and the time the patient is transferred to the ED gurney, bed, chair, or other acceptable location and the emergency department assumes the responsibility for care of the patient.¹ The Clock Start (eTimes.11) is the time of patient arrival at the destination (hospital), and the Clock Stop (eTimes.12) is time the care of the patient is transferred.² REMSA obtains both times from the ePCR.

APOT -1 Specifications

Criteria: All 911 transports to a hospital emergency department for which the patient arrival and transfer dates and times are “logical and present.”³

Method: Aggregate of all transfer times and reported at the 90th percentile (the value for which 90% of the times are shorter).

APOT -2

An ambulance patient offload time interval process measure. This metric demonstrates the incidence of ambulance patient offload times expressed as a percentage of total EMS patient transports within a twenty (20) minute target and exceeding that time in reference to 60, 120 and 180 minute time intervals.⁴

Ambulance Patient Offload Delay (APOD)

Any delay in ambulance patient offload time (APOT) that exceeds the local ambulance patient offload time standard of 25/30 minutes (Riverside County EMS Agency applies a 30-minute standard). This shall also be synonymous with “non-standard patient offload time” as referenced in the Health and Safety Code.⁵ If the transfer of care and patient offloading from the ambulance gurney exceeds the 30 minute standard, it will be documented and tracked as APOD.⁶

Data for this report has been collected from ePCRs (electronic patient care reports), which are available after they have been completed by the provider. There is, therefore, an inherent latency to the availability of these records. Due to this latency, subsequent reports may feature higher aggregate numbers than earlier reports for the same reporting period. The difference is insignificant (averaging less than .07%) and does not impact overall compliance.
